

### Year 3 Home learning task - Science

This half term as part of our science unit this term the children have been looking at plants. They have planted a sunflower to look after which will need to be kept in sunlight and watered every day.

To continue their learning at home we would like the children to demonstrate their knowledge of the life cycle of a plant. The main stages are:

- Germination
- Growing and flowering
- Pollination
- Fertilisation
- Seed dispersal

Children are to design and create a way to represent each stage in this cycle. Here are some ideas to help them:

- Draw the stages on a paper plate adding arrows to show the order.
- Make a poster to show the different stages.
- Create a small book with a stage on each page with diagrams.
- Write about what happens at each stage.
- Make a PowerPoint with each stage on a new slide.

We look forward to seeing your projects.
